**Nigeria Space Agency
National Space Research and
Development Agency (NASRDA)**

AFRICAN SPACE AGENCY

The African Space Agency (AfSA) was officially inaugurated in Cairo, Egypt, in 2025, marking a historic milestone in Africa's pursuit of space exploration and innovation. The event brought together delegates from more than 65 countries, reflecting widespread international support and collaboration.

AfSA is set to coordinate Africa's space programs, promote space science and technology, and strengthen global partnerships to enhance applications such as Earth observation, disaster management, and climate monitoring. This achievement underscores Africa's expanding influence and commitment within the global space sector.

About Africa Space Conference

The conference is organized by the Nigeria Space Agency popularly known as National Space Research & Development Agency (NASRDA), and it seeks to drive discussions on harnessing space-based technologies for critical sectors, unlocking investment opportunities for startups and innovators, and expanding Africa's participation in global Space economy operations.

By facilitating collaboration between local and international stakeholders, this edition will play a pivotal role in positioning Africa as a key player in the evolving Space industry, leveraging innovation for sustainable economic growth.

We are committed to helping African Space businesses grow with modern solutions that drive efficiency and innovation. Our strategies are tailored to meet your unique needs and deliver exponential results. This time, Africa's Space participation must be geared towards accelerating growth.

Africa is not waiting, Africa is ready

Join us at the Africa Space Economy Innovation & Communication Conference 2026
to be part of the transformation.

Why this Conference Matters

Africa is at a turning point

- 
- 1. Connectivity Gap:** Over 600 million Africans still lack reliable internet access, satellite and space-based solutions can bridge this gap.
 - 2. Climate Change & Agriculture:** Space data and satellite imaging are critical for monitoring climate patterns, improving food security, and managing natural resources.
 - 3. Economic Growth:** The global Space economy is projected to reach \$1 trillion by 2040. Africa must seize its share by investing in talent, infrastructure, and innovation.
 - 4. Youth & Innovation:** With the world's youngest population, Africa has the human capital to lead in Space innovation if given the right platform and support.

These are the reasons why the Africa Space Economy Innovation & Communication Conference is vital - it positions Africa as not just a participant, but a driver of the global Space economy.

Participants

Who is Attending

This conference is a major Space conference in Africa, as it tends to bring together major operators, Heads of the Space Agencies in Africa, International Space operators, local business and innovative startups across the globe.

Your Benefits

Major benefits of attending this event would be to network with key players in the Africa Space industry, international Market operators, see the gap that exists for your business to thrive in Africa. Africa remains untapped; be a pioneer and own your market share
